

AI Leadership Question Guide

Use this guide to lead effective conversations about AI and data science projects, even without a technical background. These questions will help you make smarter decisions, avoid costly mistakes, and build future-ready leadership skills.

Five Critical Questions for AI Project Discussions:

1. What exact business problem is this AI solution solving?
2. How will success be measured, and are those metrics tied to real business outcomes?
3. What data is being used to train this model, and is it representative and free from bias?
4. What are the risks of false positives and false negatives, and how will they affect the business?
5. How will this AI solution impact compliance, customer trust, and long-term brand reputation?

Bonus Leadership Prompts:

- Can this AI solution be explained clearly in business terms to non-technical stakeholders?
- What assumptions have been made in building this model, and how confident are we in them?
- How will this project drive measurable ROI within the next quarter, year, and five years?
- Are we prepared to monitor and update this AI system as data and market conditions change?
